

Updated Featured Coffees

Changes Made:

We can make a better UI design by providing a search bar to search for coffees of their choice. Rather than only suggesting the coffees on the app we can provide a search bar for the users to search coffee of their choice. I have added a search bar to search coffees from the coffees listed in the app by the shops providing coffees with the app.

Updated Options

Changes Made:

I have improved the UI by adding profile image for the user and adding a logout button. The improvement is meant to make the app feel personalized for the user, they can change their profile picture or can choose default avatars in the app. And providing a logout button will help user to switch from the active account.

Updated Order, Pay & Review

Changes Made:

Changing the single item view here is from "Proceed to Pay" to "Buy" button. Providing the number of coffees to order in item view was quite clumsy and so shifted it to place order view where we can cancel the order or proceed to pay and change the number of coffee required. Buy button adds the item in the cart or place order view, basically changing the model from from two steps of buying + adding number of coffees and then payment to three steps first buy then place order and then payment making it more clear and easy and handy for users for buying, adding quantity and then payment here user can cancel the order before proceeding to payment and that seems more controlled feature.
