

Design Sketch

This design shows an app screen where the students collaborate by sending text messages to a common group chat.

Students Collaboration in the student chat room

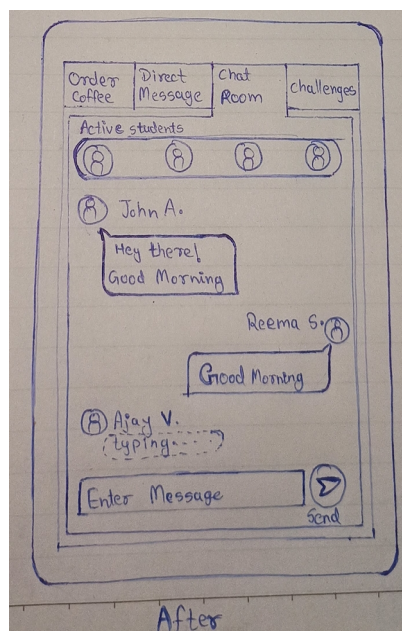

Iteration 1

What it is about?

The sketch shows the app screen “Chat Room” (active) with all the chats while communicating in the app.

Actions for the users to take

The student enters a message in the “Enter message” field and clicks on the send button to post a message for all students in the chat room to see.

Students Collaboration in the student chat room

Iteration 2

Design Principle(s) applied

- **Proximity:** The “Active Student” text is placed on the top left of the screen below the tabbed menu Chat Room. Below the text the active students’ DP (Display Picture) of the active users is displayed.
- **Space:** enough space is set around elements to give a good feel of the app sections.

Design rationale

- Students click the DP it opens the direct message tab to message the user personally.
- Allow students to find the appropriate classmate for a discussion.
